842 [789] place after a long period of time, may resort to an anti-sterility remedy, which consists of the pulverized leg bone of a fox, which is mixed with manioc beer and drunk. Both men and women say that the preferred first child is a boy, which is justified on the basis that the father needs, and would enjoy having, a son to go hunting with him. Ideally, the birth of a son should be followed by that of a daughter. There is no clear-cut prejudice against offspring of one sex as against the other.

843 [824] The Jívaro are aware of the relationship between insemination and pregnancy, and predict that a fully mature woman can give birth to a baby when the *naitka* tree (botanical identification unknown) has flowered three times after her marriage. The *naitka* flowers twice a year, so their estimate is a year and a half. If the bride is just barely past puberty, they estimate that a longer period, five *naitka*, or two and a half years, is required.

[836] [849] Since premarital sexual relations are common, the birth of a child in a shorter period after marriage is not a cause for surprise. After the birth of the first baby, a three *naitka* minimum is estimated for the next.

[823] It is recognized that pregnant women have strange food cravings and may practice geophagy, something never done by anyone else in the society. They may eat, in small amounts, unfired pottery clay or the brown earth from tubular, above-ground anthills. When birth is expected within five days or so, the woman's diet is restricted to exclude the meat of certain wild birds.

844 Preparation for the birth primarily consists of placing two stout forked sticks, supporting a crossbar about two and a half feet above the ground, in the expectant mother's garden. At the time of birth, a clean banana leaf is placed under the
